Dalle de Verre Fragment

Brief description: Orange Dalle de Verre glass. In a rectangular shape.

Dalle de verre', literally meaning 'glass slab', was a technique invented in the 1930s. Pieces of 'slab' glass (i.e. a flat sheet of glass of varying thickness) are broken up with a hammer or cut. This produces chipped, faceted pieces of varying thickness, which refract and reflect light in striking ways. These pieces are then set in a matrix of concrete or epoxy resin. The result is colourful and striking, with deeper, almost glowing colours from the reflected light.

Object type: glass fragment

Number of objects: 1

Production date: 1

Dimensions: Height: 200 mm, Width: 121 mm

Acquisition: gift

Acquisition source: The Glass House The Glass House & Lettice Street & Fulham & London & England

This item is not currently on display and can only be viewed by prior arrangement

Accession number: ELYGM:2008.8.6
